

Forklift Fork Positioner

Fork Positioner for Forklift - A fork positioner is an apparatus constructed out of top quality materials intended to be able to endure the most difficult operations and work environments. This piece of equipment could enable the individual driving to operate the blades hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the arms or the entire load so as to facilitate much more precise carrying and position in a faster and much more effective way.

The unique blade pocket design can enable the individual operating it to be able to securely swing the unit's forks without any fear of destroying the positioning cylinders. This can allow the operator the option to either execute independent or simultaneous blade movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be transformed into fork positioners on existing units.
